
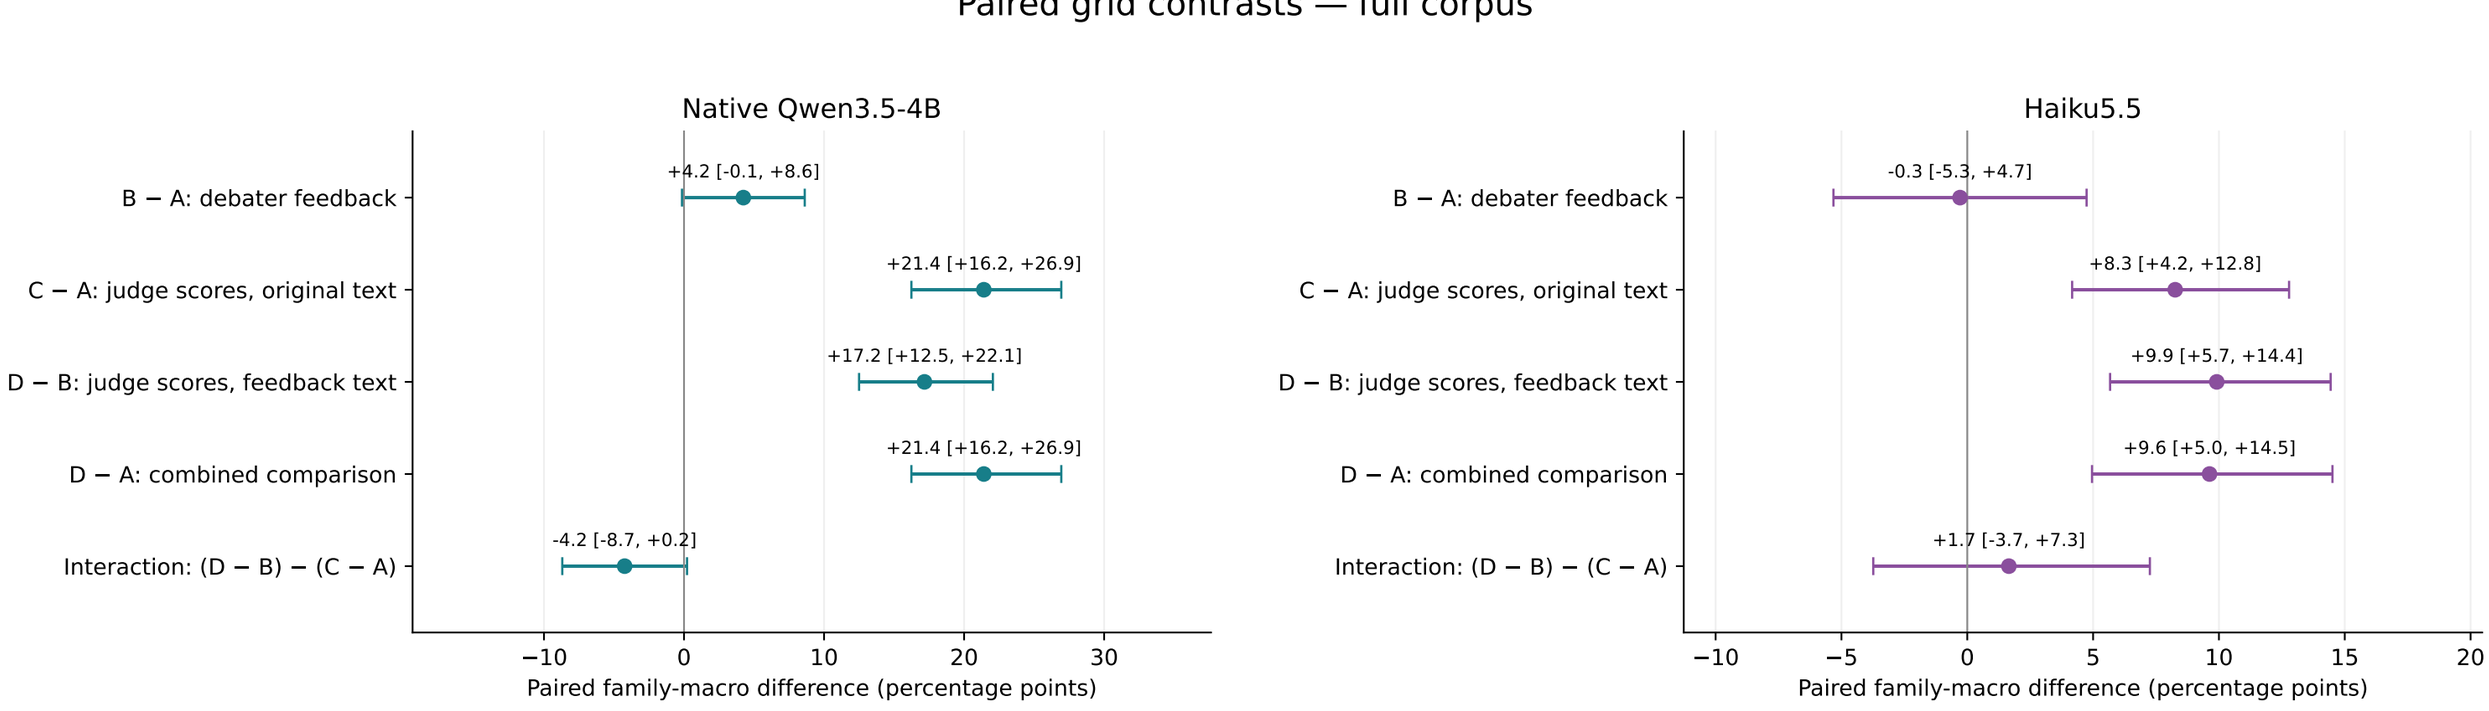
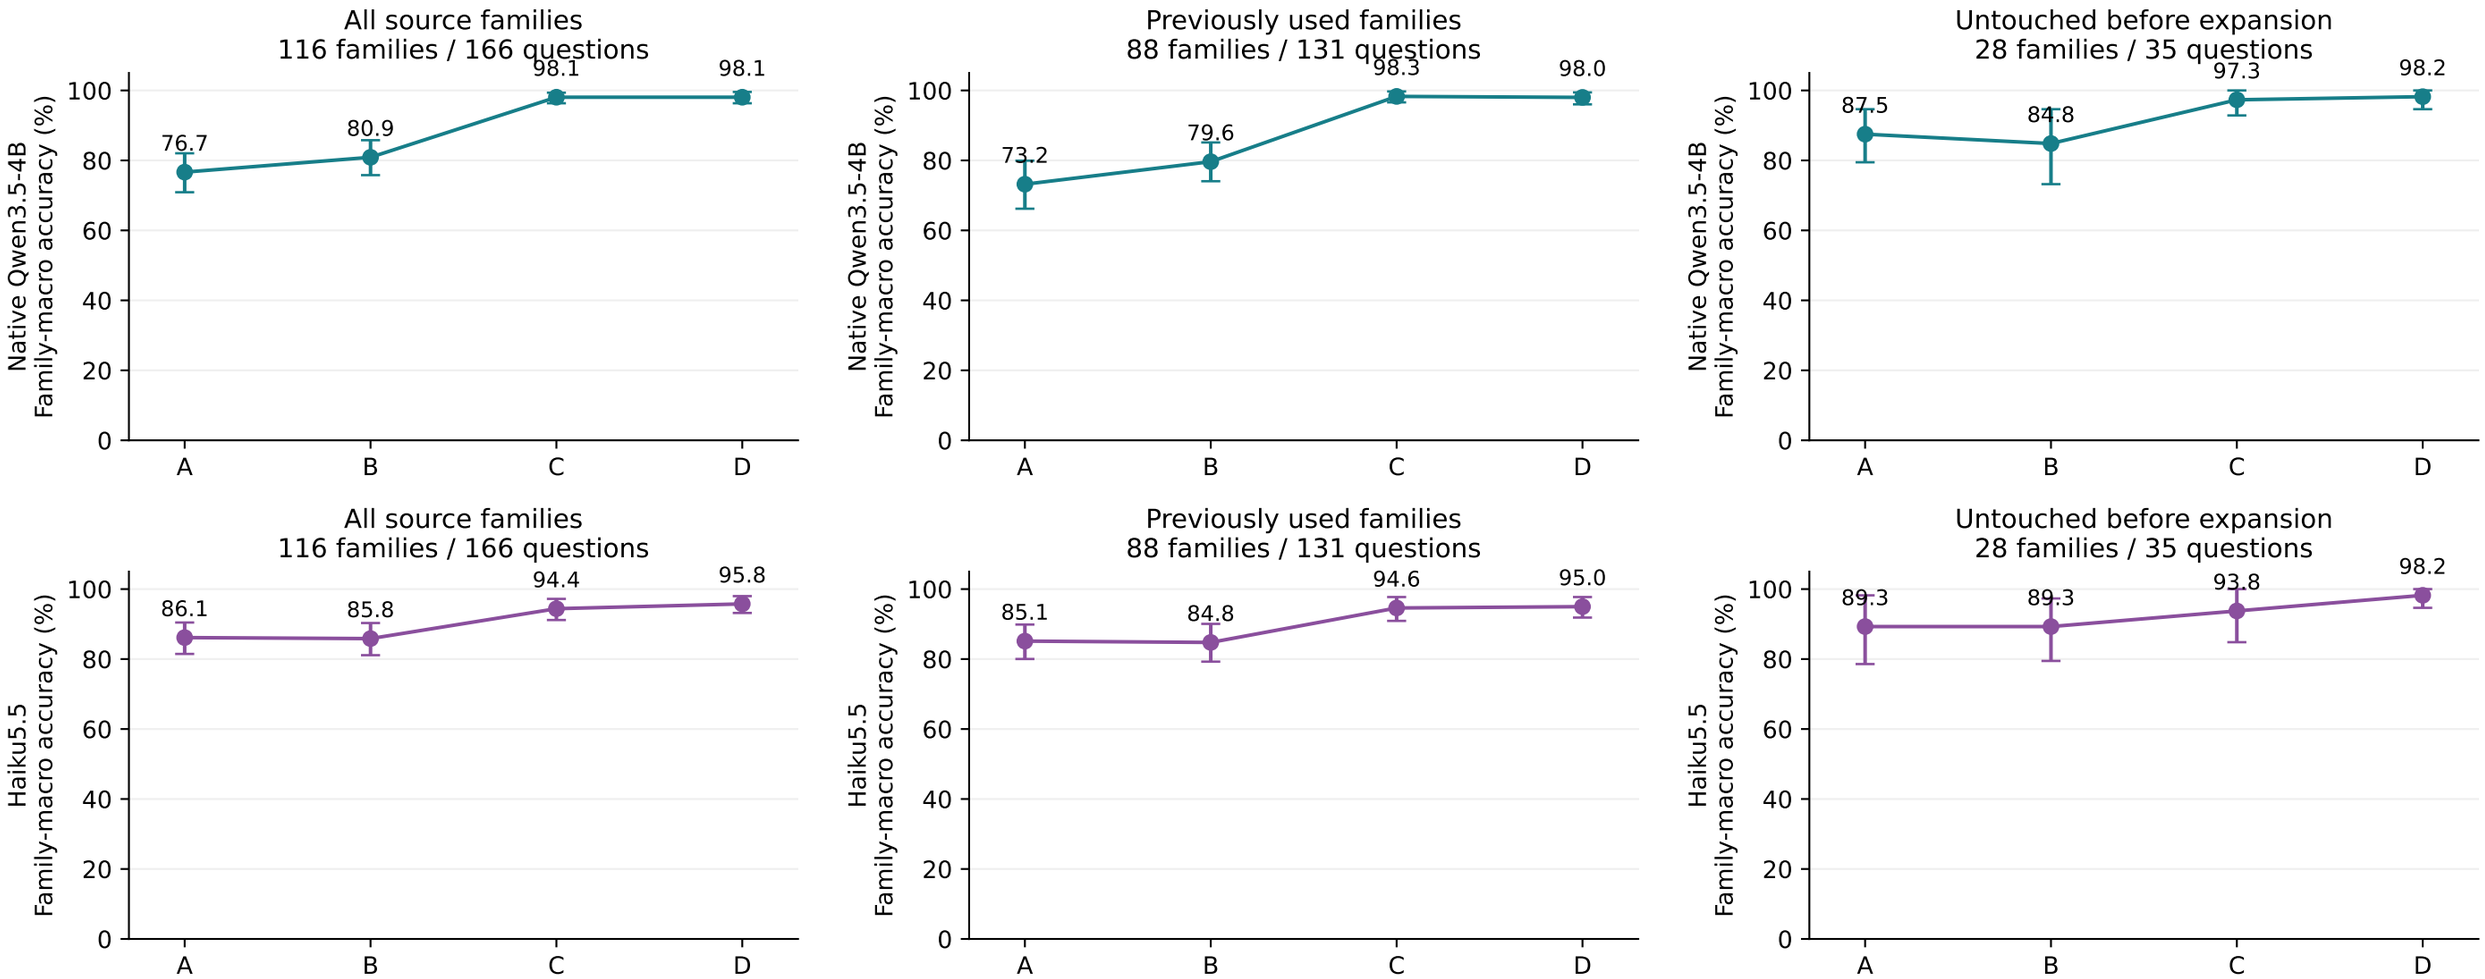
Equal-weight source-family means; all questions and both participant models stay paired within family.
A/C share a transcript; B/D share a transcript. Counts are descriptive question/model presentations.



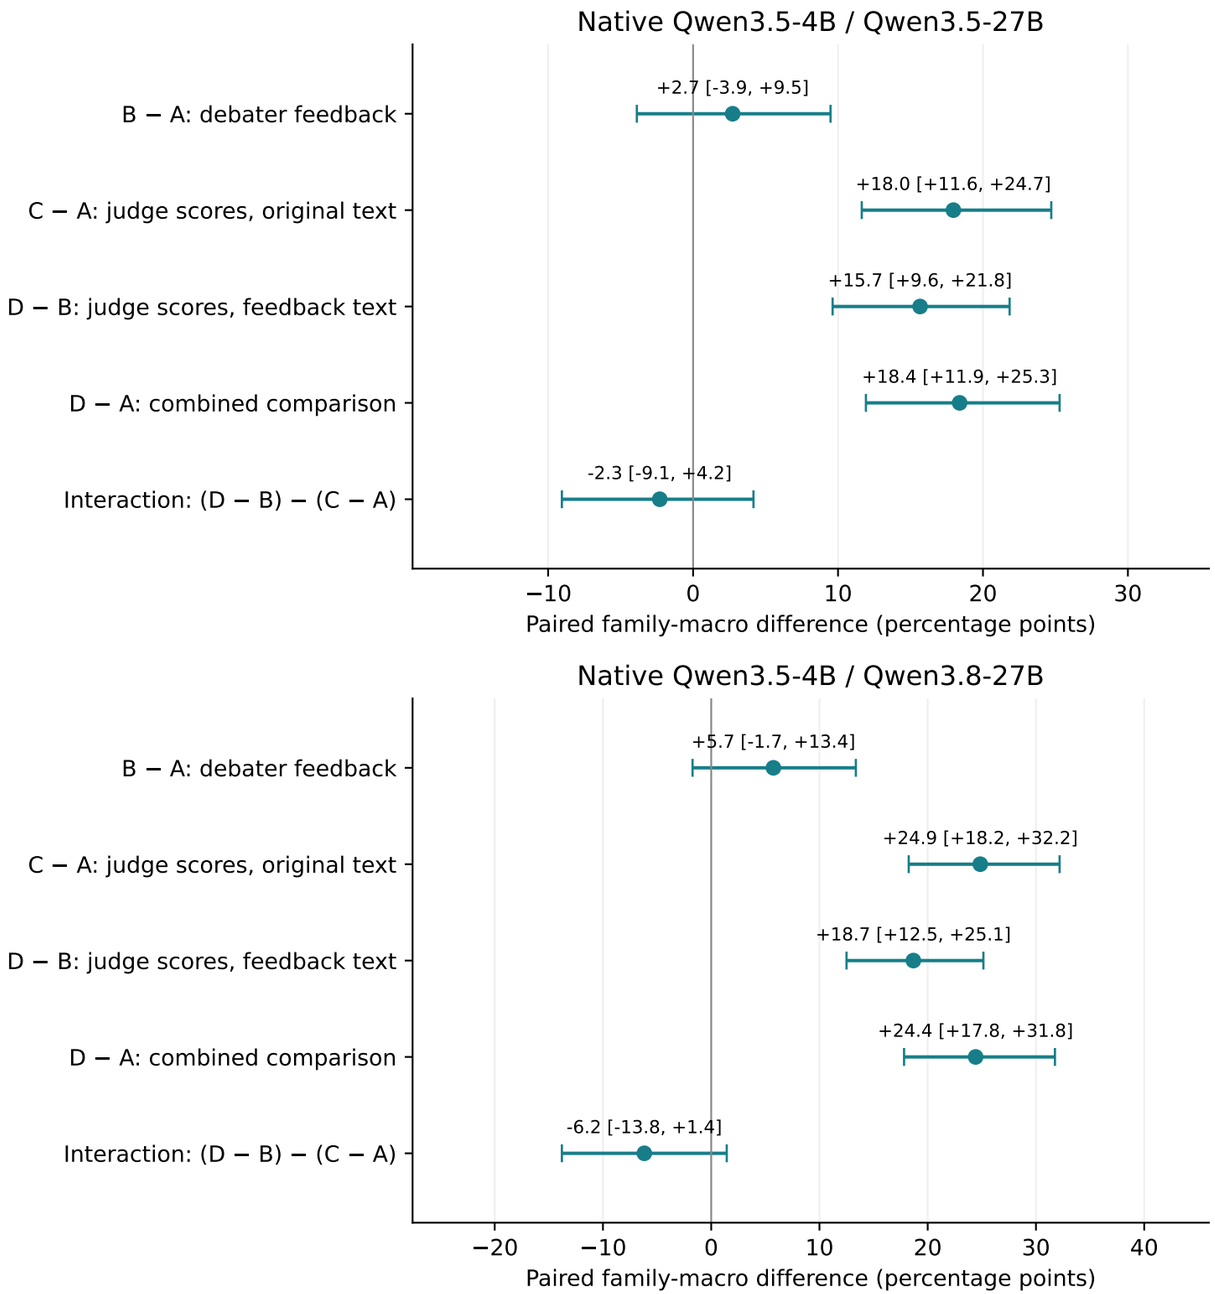
Equal-weight source-family means; all questions and both participant models stay paired within family.
Unadjusted 95% family bootstrap intervals. Feedback comparisons retain generation and intervention-bundle limitations.

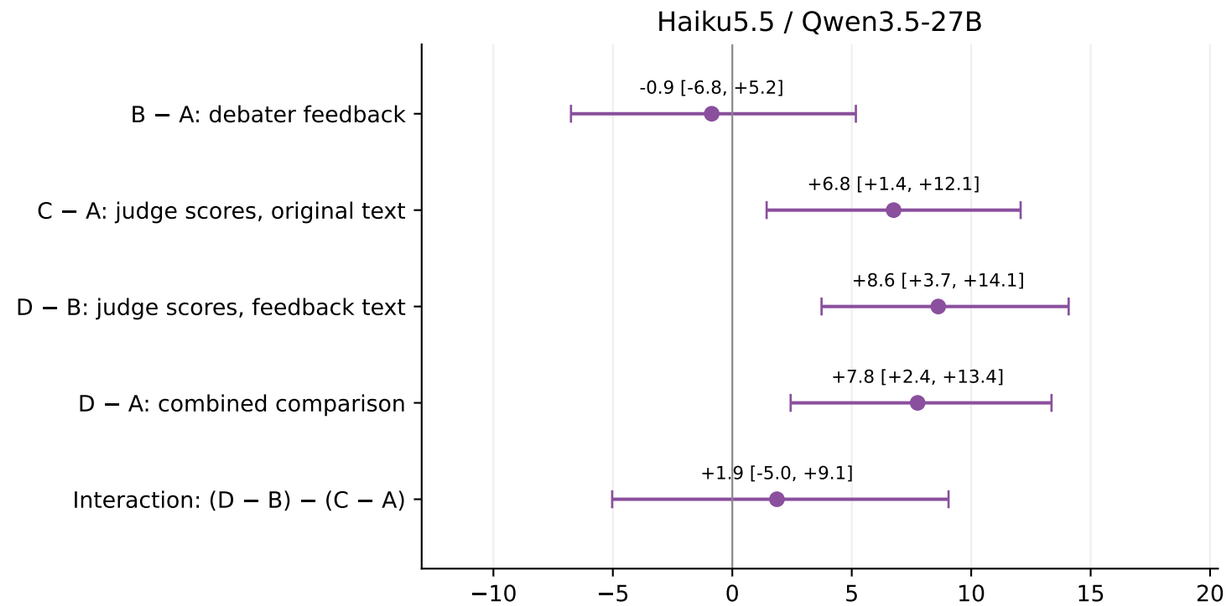
Prior exposure and untouched-family generalization

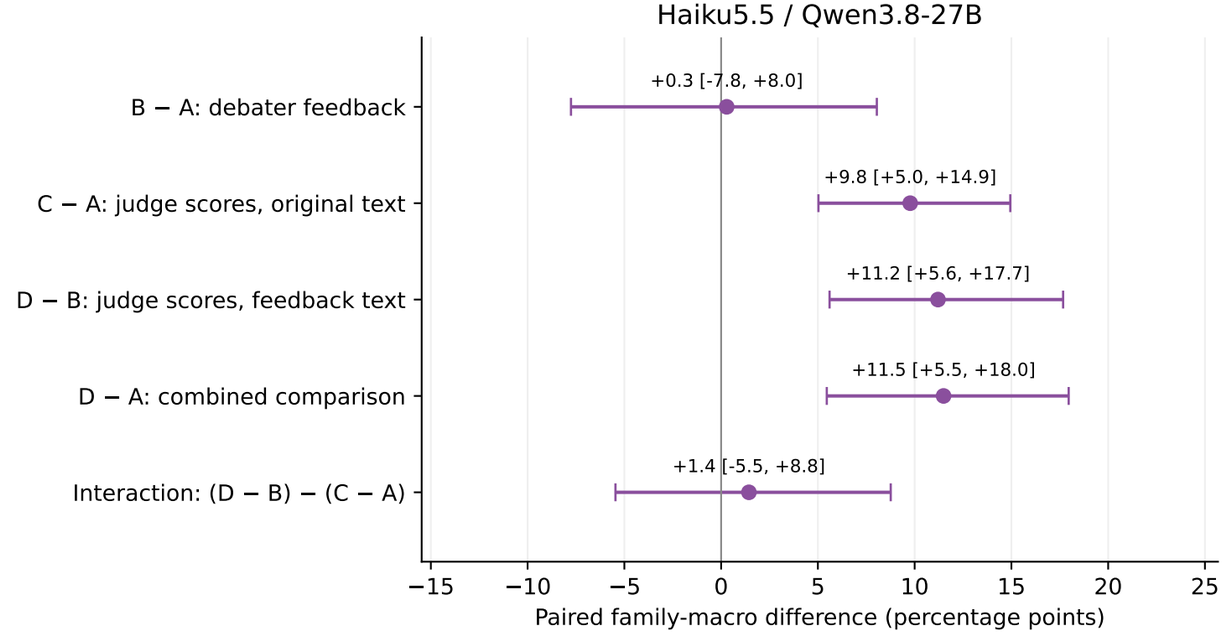


Equal-weight source-family means; all questions and both participant models stay paired within family.
Untouched means no use before this expansion; the full corpus includes training, development and earlier evaluation families.

Paired grid contrasts by participant model

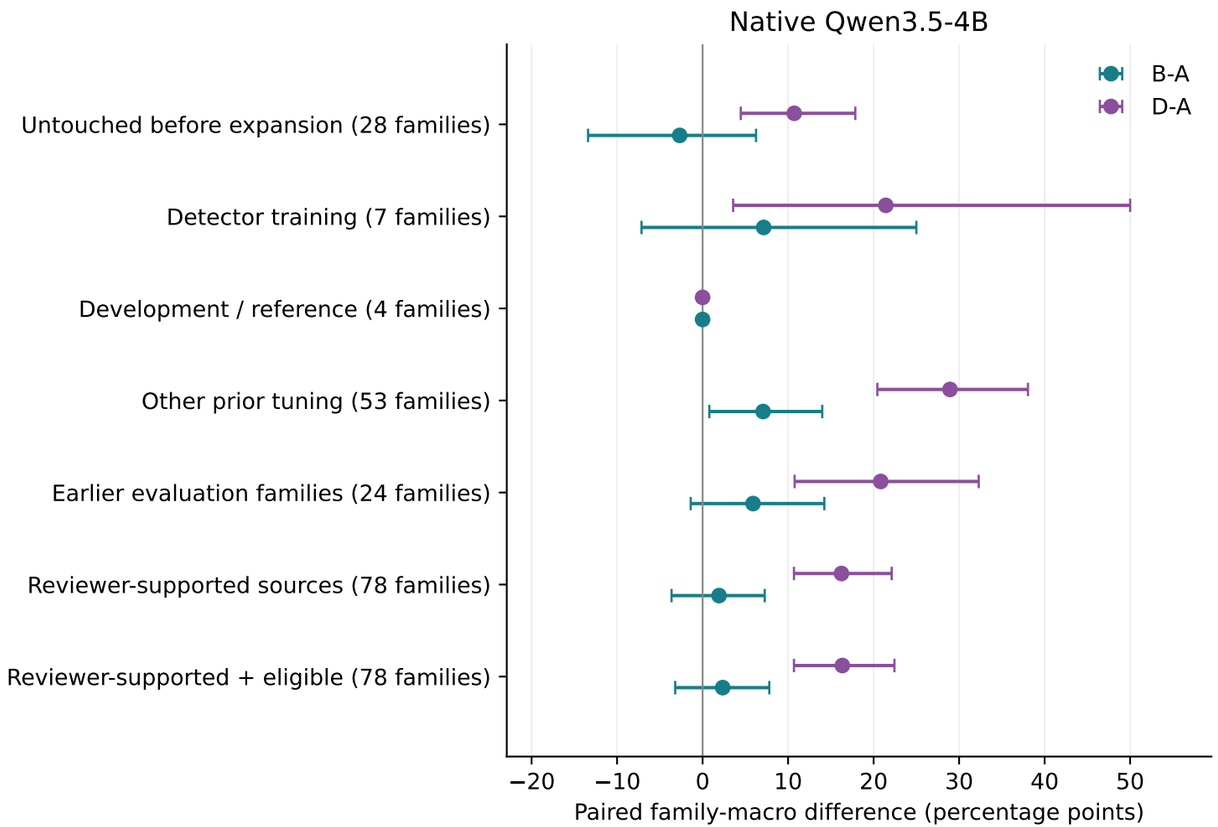


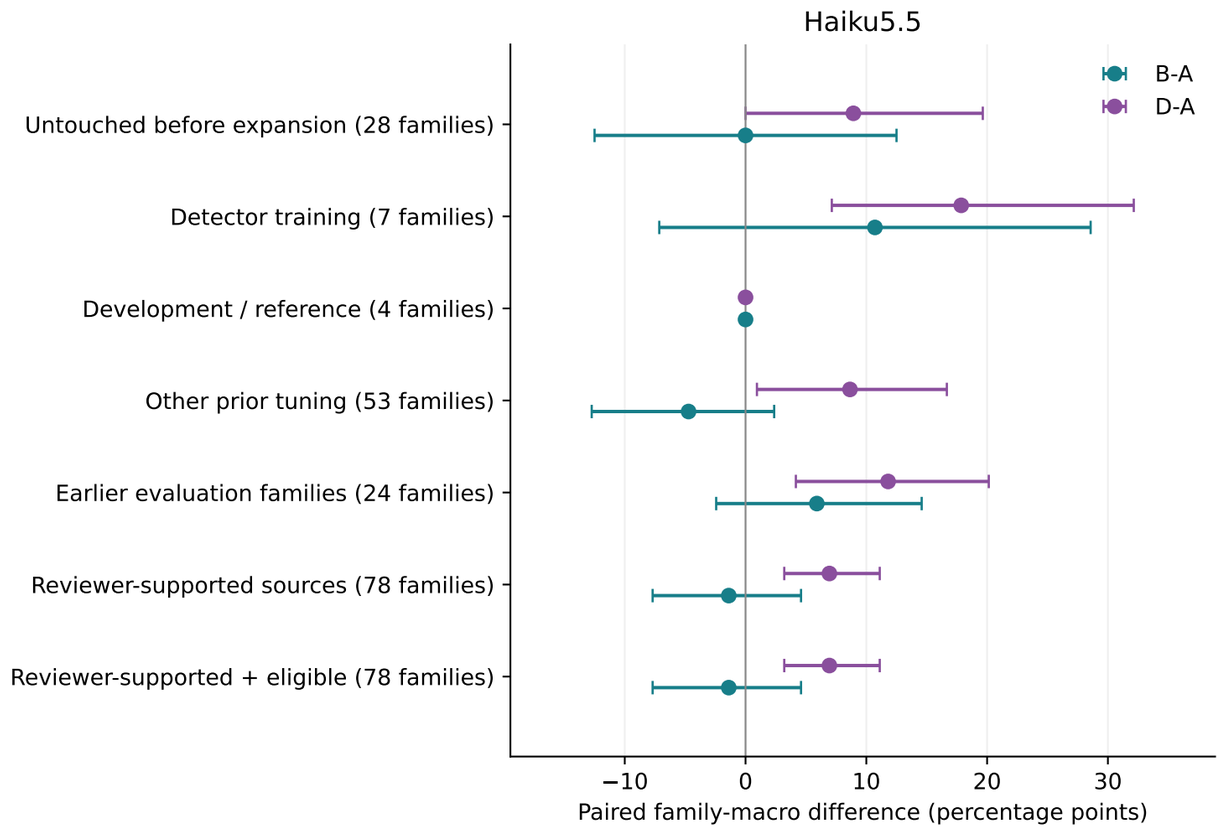




Equal-weight source-family means; all questions and both participant models stay paired within family.
Unadjusted 95% family bootstrap intervals. Feedback comparisons retain generation and intervention-bundle limitations.

Feedback comparisons by exposure and secondary diagnostic cohorts





Equal-weight source-family means; all questions and both participant models stay paired within family.
Reviewer-supported is a source diagnostic, not gold certification. Secondary diagnostic cohorts may overlap exposure strata.
